

ACT INSTEAD OF REACT.

Take the right action now.

Increase the flexibility of your maintenance - but do it right.

In challenging times with increasing cost pressure, *act instead of react* applies.

WHY?

The weakening economy and the Coronavirus are leading to reduced production and plant utilization - and that also requires adjustments in maintenance.

It is essential to **identify and implement the RIGHT adaptation measures**.

Because only effective measures increase the flexibility and profitability of your maintenance and enable an immediate improvement of the operating results.

Rely on a structured approach and the right measures.

WHAT?

In practice, **15 approaches to adjust maintenance and increase flexibility and profitability have been proven to be particularly effective:**

1. Adjusting goals for maintenance -services, -processes and -organisation	2. Reducing maintenance services selectively	3. Designing the maintenance organisation	4. Prioritising maintenance activities correctly	5. Cost-cutting alternatives in the execution of M&I measures and repairs
6. Proper planning of investments and changes in assets	7. Avoiding downtime in maintenance processes	8. Transferring selected maintenance tasks to production	9. Identifying and avoiding weak points	10. Time saving Document Management
11. Spare parts and warehouse management	12. Optimising plant revisions	13. Evaluating the plant substance as basis for cost avoidance	14. Risk-based adaptation of maintenance and spare parts strategies	15. Achieving savings through proper implementation of legal guidelines

HOW?

To apply the 15 tried-and-tested approaches to increase flexibility and economic efficiency in your company, **simply choose between 4 possibilities (modules)**:

1 WORKING DOCUMENTS:

Identify your most effective optimization approaches. We support you with working documents (guidelines, checklists, practical tips) to help you select and implement the relevant approaches. Increase the flexibility and efficiency of your maintenance step by step on the basis of the working documents.

2 IN-HOUSE WORKSHOPS:

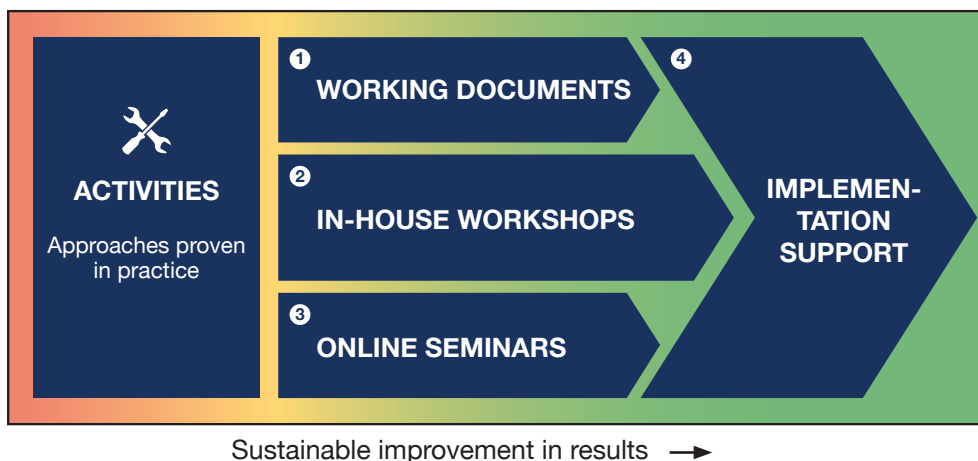

In a one-day workshop, we work with you to identify the most important approaches to adapting maintenance for your company. We systematically identify and evaluate those approaches that enable quick and at the same time effective improvements in results. The resulting adaptation measures are summarised and scheduled in an implementation plan.

3 ONLINE SEMINARS:

The contents and adaption measures of the 15 approaches are explained in detail by a maintenance expert in online seminars. The individual approaches are combined into thematic blocks and held on four planned dates. All information about the online seminars, dates and registration conditions you can find at www.dankl.com/online-seminar-flexibilitaet_steigern.

4 IMPLEMENTATION SUPPORT:

We would be happy to support you in the targeted implementation of your selected optimization approaches to increase the flexibility and profitability of your maintenance. The implementation support is oriented towards your requirements in terms of subject content and adaption measures. You will be supported by our experienced practical experts.

You can combine any of all four modules with each other.

Each individual component contributes to the effective optimisation of maintenance in your organisation - exactly to the extent that is needed in your current situation.

Act instead of react.

Adapt your maintenance to changing market and production conditions. Realize, which approaches enable an immediately effective increase in flexibility and profitability and thus ensure an improvement in operating results.

We help you to recognise your strengths and opportunities for improvement, to increase the performance of your maintenance and use it for the benefit of your company. Especially in these difficult times.

**Take the right action now! Call us or write us a short e-mail.
We will support you immediately – on site or digitally.**
